transparency

Job and pending job list boosts productivity

Simple management of predefined jobs

messageLOG® is an app for efficient assignment and completion of routine jobs. The customer defines simple jobs, the «messages», which the service provider receives and performs. Irrespective of your field of work, it boosts productivity and guarantees greater transparency.

For all industries

The possible applications are unlimited. Whether in the factory, on the building site, in healthcare or the food industry: with messageLOG®, you can assign routine jobs such as repair and maintenance tasks or the collection, supply and replenishment of goods and materials to specific service providers who carry out these jobs as instructed and confirm their completion.

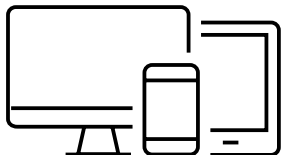

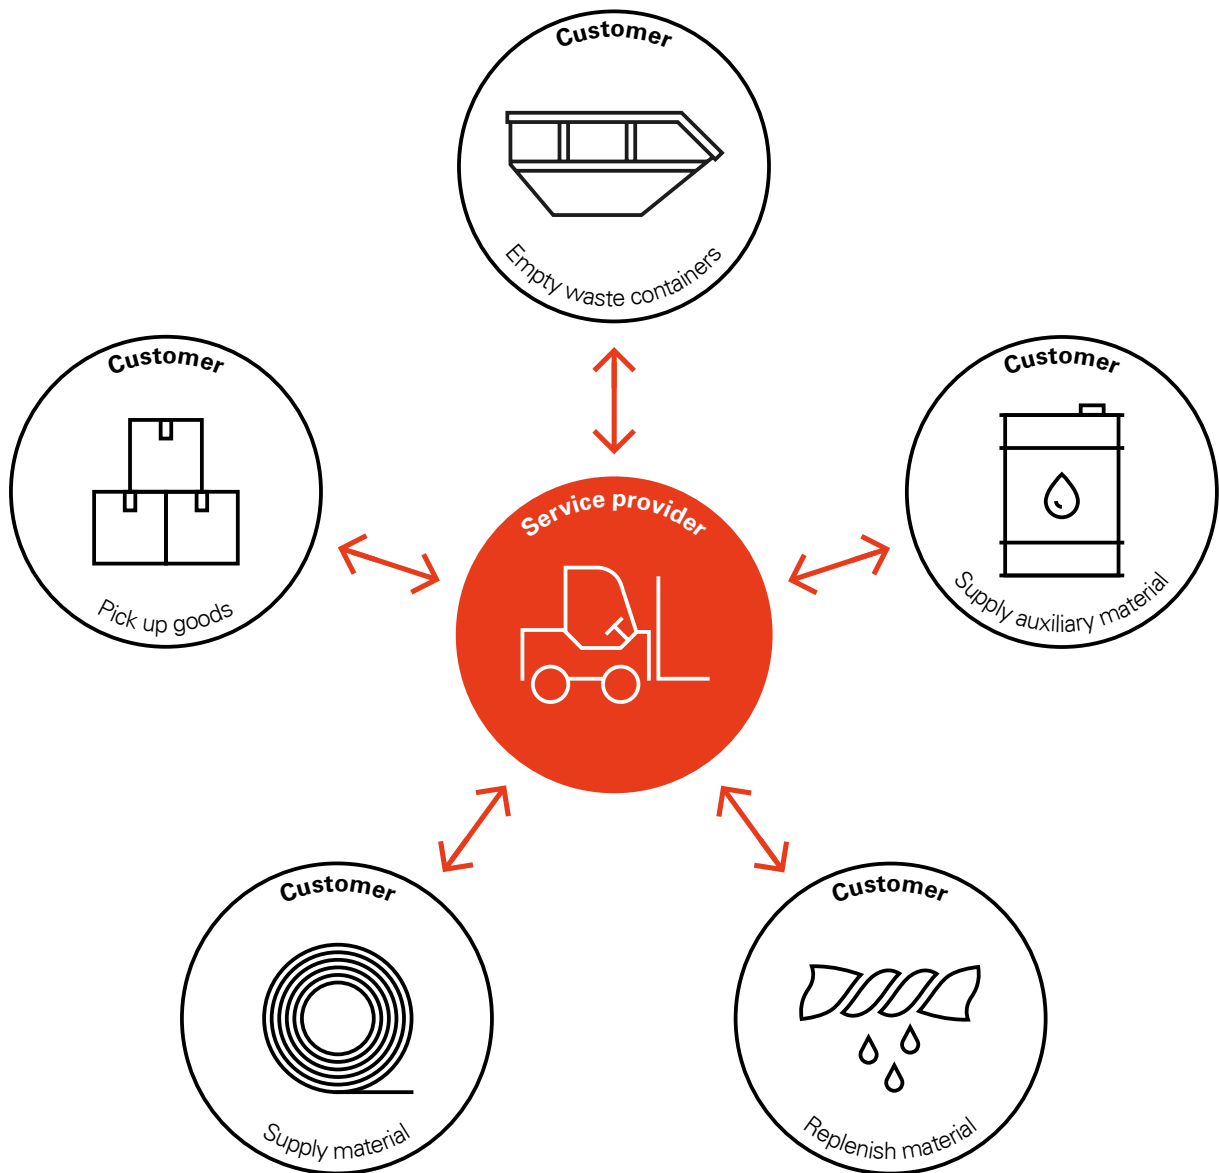

More time for the essentials

With messageLOG®, you avoid waiting times and unnecessary duplication. With the app's transparent information flow you can be sure that no jobs are forgotten and your processes run smoothly. You increase your output and have more time for productive work.

Simple to use

Using, administering and understanding how messageLOG® works is child's play. Just create your jobs and define the roles. Simple reports give users a quick overview of the current situation. Real-time communication ensures customers and service providers can see their job status and pending workload at any time.

Features & Benefits
